

An overview of NPDES Phase 2

Stephen R. Bicking, P.E.
HR Green, Inc.

Stormwater runoff is a major source of water pollution. When rain falls or snow melts, it picks up debris, chemicals, dirt, and other pollutants and often flows directly into lakes, streams, and wetlands. As areas experience growth and development, impervious surfaces such as roads, parking lots, and rooftops increase. Effective management of stormwater is a community effort that requires investment in public infrastructure coupled with changes in corporate and personal behavior.

Stormwater is a major concern of the U.S. Environmental Protection Agency (EPA). Congress directed the EPA to develop a Federal program under the Clean Water Act to regulate all discharges into public waters including stormwater runoff from urbanized areas (as defined by the census). The Illinois Environmental Protection Agency (IEPA) issues stormwater discharge permits under the National Pollutant Discharge Elimination System (NPDES). Wheatland Township is regulated under Phase 2 of the NPDES program. The IEPA, through the use of NPDES permits, monitors Municipal Separate Storm Sewer Systems (MS4) programs and practices that were put in place to control polluted stormwater runoff.

Phase 2 defines a small MS4 stormwater management program as a program comprising six elements that, when implemented, are expected to result in significant reductions of pollutants discharged into receiving water bodies. The six MS4 program elements are termed “minimum control measures” and are as follows:

1. Public Education and Outreach
2. Public Participation/Involvement
3. Illicit Discharge Detection and Elimination
4. Construction Site Runoff Control
5. Post-Construction Runoff Control
6. Pollution Prevention/Good Housekeeping

Wheatland Township is in the process of implementing their stormwater management programs. A new NOI was submitted to IEPA in 2016 and an annual update was completed for 2015. The Township also has a stormwater management plan.

Water quality affects everyone and Phase 2 is intended to further reduce impacts to water quality and aquatic habitat by instituting the use of controls on the unregulated sources of stormwater discharges that have the greatest likelihood of causing continued environmental degradation. The Township has done this through the adoption of Best Management Practices that contribute to the improvement of water quality and the tracking of stormwater discharges. If you have any questions relating to NPDES Phase 2, please contact Bill Alstrom, Wheatland Township Highway Commissioner, at 630-717-0092 ext 3.
